

ABSTRACT

A system and method for a physician to cause a sleep test device to be delivered to a patient, for retrieving the collected data (and optionally the test device), and for the controlled and secure distribution of the results of the test collection to the physician. The system includes a user interface
5 coupled to a network, including a test ordering system, a verification system and a database including patient, test and physician records; a shipping system, coupled to the ordering system, delivering the test apparatus to the patient; a retrieval system, coupled to the ordering system; and a result delivery system, delivering the results to the
10 physician.
